Re: Tender ICB/017/MOE-2013 and Chinese Nuclear Industry Construction Company No. 22

Dear Excellency,

As we discussed last Friday, La’o Hamutuk has some concerns regarding last Thursday’s Intent to Award two contracts totaling $1,047,559 to Chinese Nuclear Industry Construction Company No. 22 (CNI22) to supply chairs and tables for schools in several districts, under tender process ICB/017/MOE-2013, so we are writing this protest letter.

We believe that it would be inappropriate to award contracts to this company, with which Timor-Leste has had extensive experience. CNI22 may not be blacklisted by the World Bank or other international agencies, perhaps because they have never done business with them. As a Chinese state-owned company, they may be protected against honest assessments by international agencies. However, this must not prevent Timor-Leste from learning from our own experience.

We can breathe a sigh of relief that CNI22's contract for the national electricity project is nearing completion. However, the company is looking for more of Timor-Leste’s people’s money, through this school furniture tender, by bidding for the Suai Airport, and perhaps other contracts. We hope that they will never receive another contract from Timor-Leste.

In mid-2008, CNI22 made a proposal to Timor-Leste for a national electricity system involving three second-hand heavy oil generating stations and a national high-voltage grid. As reported in detail on La’o Hamutuk's website,¹ Timor-Leste awarded CN122 a $367 million contract, the largest in the nation’s short history, in October 2008. The project was seriously flawed in concept, design, implementation, community relations, and quality of work. The company repeatedly failed to meet its commitments regarding keeping on schedule, quality of materials, employing Timorese workers, worker safety, and environmental management. They refused to comply with directives from the supervising consultant and others.

After two years, when CNI22 had shown that it was incapable of building the power plants it had proposed, they were re-contracted to Puri Akraya Engineering, increasing the cost to Timor-Leste by hundreds of millions of dollars and delaying the project for several years.

You don’t have to take La’o Hamutuk’s word for this. Timor-Leste has paid more than $14 million to ELC/Bonifica to supervise the power project construction since mid-2009. Their monthly reports describe CNI22’s “overall performance” as “poor” nearly every month. Last week, at a seminar in the Ministry of Public Works on this project, ELC Project Manager Massimiliano de Carli reiterated several times that: “The most important element in implementing any project is selecting the right contractor.” It is obvious to people with detailed knowledge of CNI22’s work on the electricity project that CNI22 should not have been selected, and we are puzzled that Timor-Leste wants to give them more business.

Outside observers were also aware early on. In a December 2008 cable later released by Wikileaks, U.S. Ambassador Hans Klemm informed Washington that:

In July 2008, news surfaced that the government would purchase two large electricity generating plants from a Chinese firm that would also be contracted to put into place a nationwide transmission grid. On this occasion, the government issued an international tender, although the widespread understanding in Dili was that the purchase had been agreed before the government announced the tender. Although observers described the tender announcement as insubstantial and technically inadequate, fourteen international firms submitted bids. The decision to award the contract to the Chinese firm again was made by the prime minister with very little consultation with line ministers. The power plants are old equipment (with some 40 years of service in China already behind them) that will be dissembled, exported and refitted in Timor-Leste. They will burn heavy oil that Timor will have to import. Experts describe the contracted installation of a national transmission grid within two years as a fantasy. The World Bank reportedly has urged the government to cancel the contract, absorb the penalty, and re-tender the project.

We also wonder what CNI22 knows about school furniture. The company's description gives no indication that they work in this area:

During the past 50 years, CNI22 has completed more than 2000 construction and installation works, and the total construction area was over 2 million m². Our company has undertaken a large number of construction works of power plants, factories, housing, airports, bridges, roads etc, and for the good quality of our projects and technology innovation, CNI22 is awarded more than 80 national and provincial and municipal prizes, including the construction engineering “Luban Prize”. CNI22 have offices in 39 countries, and we still have Projects under construction in Algeria, Sudan, Pakistan, Mongolia, Vietnam and East Timor. In the field of civil engineering, Our company possesses 8 grade-1 qualifications, including housing construction, electrical engineering, mechanical and electrical installation works, steel works, the installation of lifting equipment, blasting and demolition engineering and nuclear engineering and so on.

Finally, we encourage the National Procurement Commission to consider how contract awards can help Timor-Leste businesses grow, creating employment and keeping more of our national wealth in this country. Many Timorese companies can make chairs and desks appropriate for our schools, and this tender is a valuable opportunity to help them develop. Thirteen years ago, La'o Hamutuk and others raised this issue with the World Bank and AusAID, and the agencies made changes in procurement of school furniture to enable local companies to participate. Today, in this sovereign nation spending our own money, we should not throw away this opportunity.

CNI22 will import furniture from China, sending our people’s money outside the country. Their record gives ample reason not to trust the quality or timeliness of their promises.

Many large tenders here require skills, resources or experience that Timor-Leste companies do not yet possess, making it even more important to ensure that tenders which do not have such complex requirements, like this one, will use locally-made products rather than those imported from afar.

We encourage CNA not to award this or any other contract to Chinese Nuclear Industry Construction Company No. 22, and to develop a system of blacklisting companies which have shown bad faith, incompetence or other inability to meet their commitments.

Thank you very much for your attention, and we are happy to discuss this further if you are interested.

Sincerely,

Adilson da Costa            Charles Scheiner
La'o Hamutuk
